

Course Recommendation System - Project Synopsis

Prepared by: Sushma Rakesh

Objective: Build a machine learning system that recommends suitable courses to users based on their skills, interests, education, or career goals.

Tools: Python, Pandas, NumPy, Scikit-learn, Streamlit.

Dataset: Course details including title, category, skills, level, duration, and ratings.

Methodology: Data preprocessing, feature extraction, similarity-based recommendation (TF-IDF/Cosine Similarity), recommendation generation, and Streamlit interface.

Modules: Data Loading, Preprocessing, Recommendation Engine, User Interface.

Outcome: Users receive personalized course recommendations matching their interests and skills.

Future Enhancements: Hybrid recommendations, user login, feedback learning, online course APIs.
